# Lanyard Roll Print

All features · Version 1.1.2 · Windows 10 / 11 · by Digital Arts

Lanyard Roll Print is Windows software for print shops that make lanyards, ID-card tapes and long banners on roll or long paper. Print a design of any length (for example 0.8" × 36" lanyards or an 8.5" × 40" banner) on an Epson ink-tank printer. **The paper stays in the printer after each print**, so the next print continues right where the last one ended. Feed it forward by any distance, and eject it only when you want.

> **One licence = one computer.** Activate with your licence key. When it is time to renew, the app shows the amount and a **Pay & Renew** button (UPI, card or net banking). Download: **apps.datpl.com/lanyard-roll-print** · WhatsApp **99332 11177**

Everything on one screen: design and layout on the left, a large preview on the right. Here: one lanyard design, 0.8" × 36", repeated 8 times across the paper.

## Roll printing: the paper stays in

### Hold the paper

- **Epson Driver + Hold** mode: the Epson driver prints with full quality, and the software removes the automatic page eject
- The next print starts exactly where the last one ended, with no waste between designs
- Designs longer than A4 or Legal print in one piece

### Feed and eject

- ▼ Feed moves the paper forward by any distance in mm
- Quick feed buttons: +5 +10 +20 +50 mm
- ⏏ Eject brings the paper out when the roll is done
- “Used on this roll” shows how much paper you have used

## Design and size

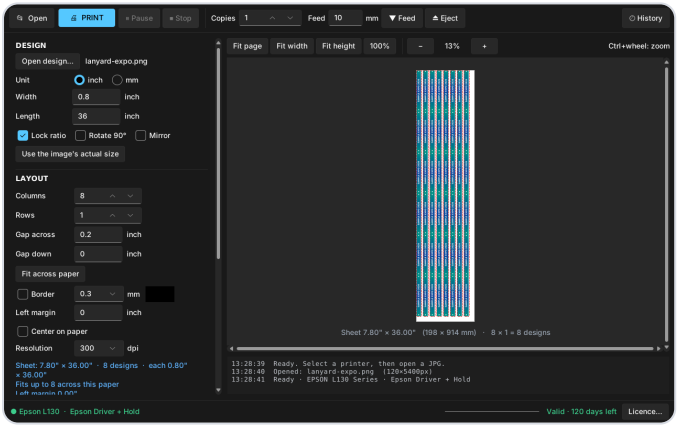

### Open any design

- JPG, PNG, BMP, PDF and multi-page TIFF
- Width and length in **inch or mm**
- Lock ratio, or “Use the image’s actual size”

### Rotate and mirror

- Rotate 90° for designs made sideways
- **Mirror** for sublimation and heat-transfer paper
- Resolution 150, 200, 300, 360, 600 or 720 dpi

## Layout: many designs on one sheet

Fit page: the whole 36" sheet with 8 lanyards across, ready to print.

### Columns × rows

- Repeat one design across and down the paper
- **Gap across** and **gap down** between designs
- **Fit across paper** puts as many columns as fit on the paper width
- The info line shows sheet size, number of designs and how many fit

### Border for cutting

- Border around each design, from 0.1 to 3 mm
- Choose any border colour
- Drawn inside the design, so the size does not change

### Position on the paper

- **Left margin** leaves space from the left edge
- **Center on paper** puts the whole sheet in the middle
- The margin is saved for each printer

## Preview

### See exactly what prints

- Large preview of the full sheet with the paper edge marked
- Fit page | Fit width | Fit height | 100%

### Zoom and move

- − and + buttons, or **Ctrl + mouse wheel** to zoom where the mouse is
- Mouse wheel scrolls; drag with the mouse to move around

## Printing

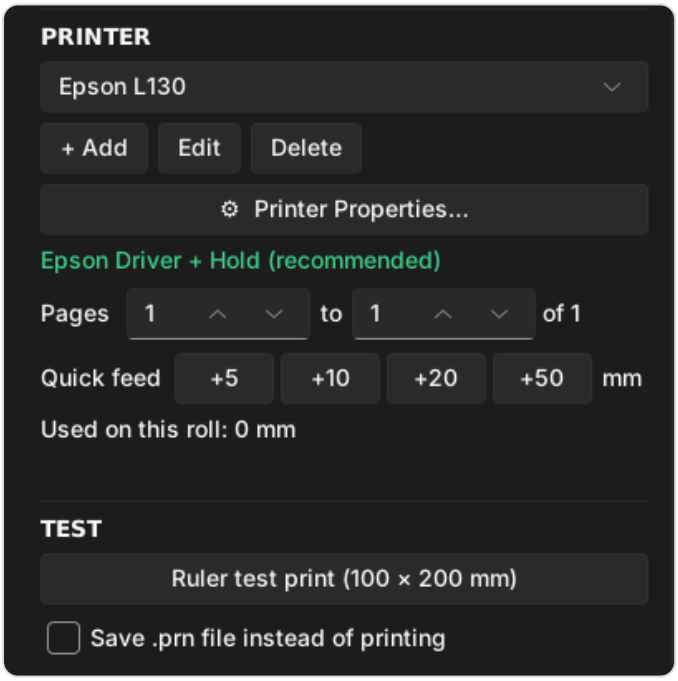

### Copies and pages

- Copies: print each page as many times as you need
- Pages *from* – *to* for PDF and multi-page TIFF files
- A gap of your choice between copies

### Pause, resume, stop

- Pause holds the rest of the job; Resume continues
- Stop cancels the current print and all remaining copies
- Progress bar and a log of every step

## Printers

Printer section: profile, Printer Properties, pages, quick feed and the ruler test.

### Printer profiles

- Add as many printers as you have; switch from one list
- Each printer keeps its own mode, margin and Epson settings
- Three modes: **Epson Driver + Hold** (recommended), **Windows Driver** (normal print on any printer, the paper ejects) and **Epson Direct** (advanced)

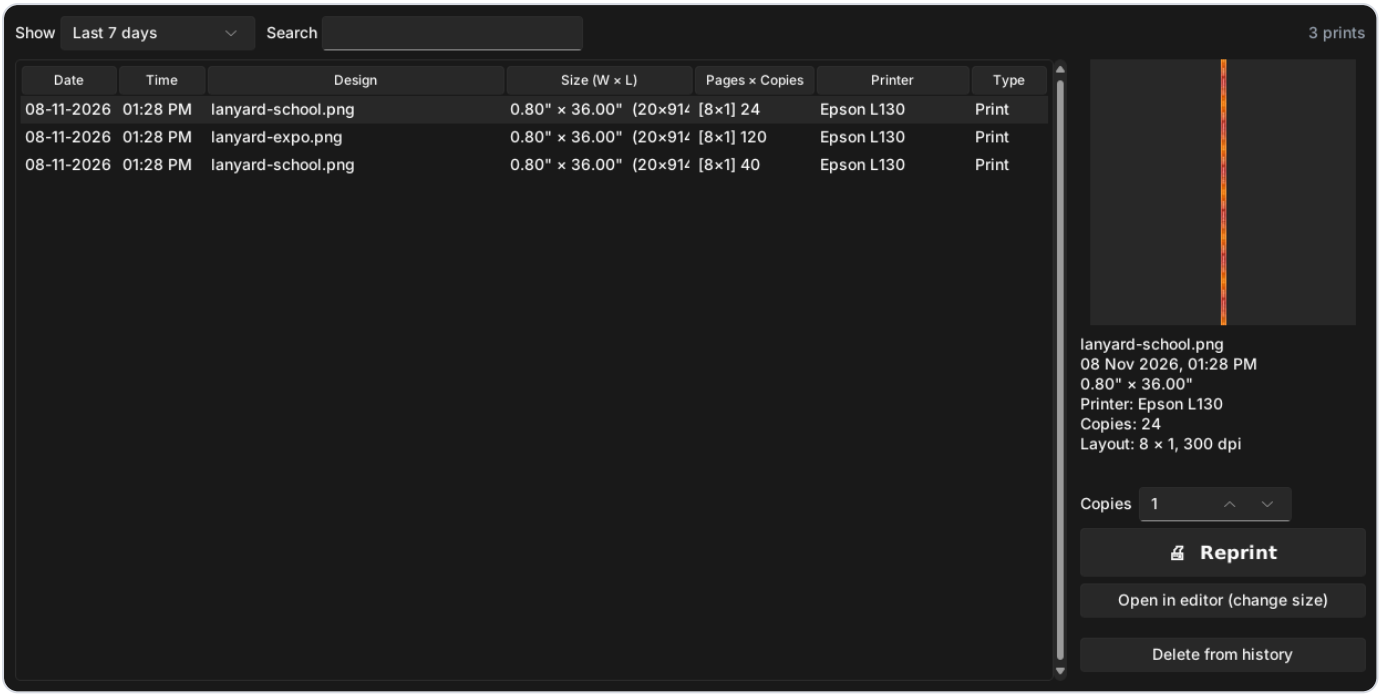

### Printer Properties

- Opens the Epson settings window right from the app
- Quality, paper type, High Speed on / off, nozzle check, head cleaning
- Saved per printer and used for every print

### Test and fine-tune

- **Ruler test print** (100 × 200 mm) to check feed and colours
- Feed correction and left offset for exact sizes
- Save the print as a .prn file to check it or send it for support

## Print history and reprint

Print history: find an old order by date or name and print it again in one click.

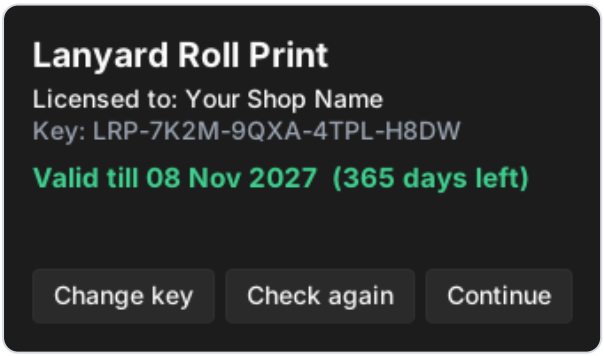

### Every print is saved

- A copy of the design, size, layout, copies and printer is kept automatically
- Today, Yesterday, Last 7 days, This month, Last month, All or custom dates
- Search by file name

### Reprint in one click

- `Reprint` or double-click: same size, layout and printer as before
- **Open in editor** to change the size before printing
- Delete old entries you no longer need

## Licence

Licence window: who it is licensed to and how many days are left.

- Licence key in the form `LRP-XXXX-XXXX-XXXX-XXXX`, locked to one computer
- The bottom bar always shows how many days are left
- **Pay & Renew** inside the app: UPI, card or net banking through Razorpay. The licence extends by itself after payment
- Works without internet for up to 7 days; then connect once to check the licence
- New computer? Send your key on WhatsApp and we move it

## System requirements

| Item | Requirement |
|---|---|
| Computer | Windows 10 or Windows 11 (64-bit) |
| Printer | Epson ink-tank printers (tested on Epson L130) with the Epson driver installed. Other printers work in Windows Driver mode. |
| Free space | About 150 MB (the download is about 30 MB) |
| Internet | To activate the licence and check it at least once every 7 days |
| Administrator rights | Not needed: installs for the current Windows user |

**Your designs stay on your computer.** Designs and print history are saved only on your PC. Only the licence key and a computer ID are sent to our licence server to check the licence. Payments are handled by Razorpay; we never see your card or UPI details.
